

INTER-INFRA-B

SPECIFICATION

Infrared switch
Voltage: 12 VDC or 24 VDC
Capacity: 24 watts in 12 VDC
Capacity: 48 watts in 24 VDC
Recessed or surface

PRODUCT DIMENSIONS

INTENDED USE

INTER-INFRA-B is an infrared sensor that detects the opening of a cabinet door or drawer. Its tripping makes it possible to light the compatible fixtures connected to it. The lights turn off once the door or drawer is closed.

WARNING

1. Install this product in accordance with the applicable electrical code. This product is designed for installation by a qualified person or electrician.
2. This product is designed to operate with a 12 VDC or 24VDC Class 2 transformer. Never connect directly to a high-voltage source.
3. This product is designed for indoor use and is not protected from moisture.
4. This product must be connected using the connectors built into the product.

WARRANTY

This product is warranted against manufacturing defects for a period of two (2) years from the date of purchase and does not include the other products shown on this sheet, if any. For a complete description of the warranty, visit www.innovadel.com or contact our technical support. Any modification, alteration, improper installation of the product, or cutting of connectors, will void the warranty.
